(54) Title: NETWORK SECURITY

(57) Abstract: A network (11) including a plurality of devices (A...F), each device being capable of wireless communication with the other devices of the network. One of the devices (C) includes administration means for allowing selected devices (A, B, C) to be associated within a domain (13) by providing each device (A, B, C) with identification data, the identification data of each device being interpretable by each other device within the domain, communication only being allowed between devices within the domain having such identification data. Controlled resource sharing between devices is permitted.
